

I am a Radio Amateur operator W6MTV and am opposed to the FCC approving broadband to be carried over power lines. This will increase noise and interference for radio communications all over this city and the country and could cause major problems in times of emergencies or disaster. Power lines should be used to carry power which is essential to residences and businesses. There are many other alternatives to carry broadband that will not cause interference. I urge the FCC to carefully review impact and not approve. Thank You. Barry Thurston
